Replication Weights for the Cohort Samples of
Students in Grade 5 and 9 in the National
Educational Panel Study

ERRATUM

Erratum to NEPS Working Paper No. 27

Bamberg, August 2014

SPONSORED BY THE

**Federal Ministry
of Education
and Research**

Background:

In Working Paper No. 27 “Replication Weights for the Cohort Samples of Students in Grade 5 and 9 in the National Educational Panel Study”, published in July 2013, the perturbation factor ϵ used to construct the replication weights has not been specified.

At this point we overcome this negligence:

The replication weights have been built for perturbation factor $\epsilon = 0.5$ (as suggested by Judkins (1990)).
